

Tenstreet SAFETY

Tenstreet's safety tools work together to create a comprehensive safety system that helps keep companies **organized** and **compliant**.

Here's what a year of using Tenstreet could look like for ABC Trucking.

ABC TRUCKING'S FIRST YEAR

TENSTREET'S SAFETY SERVICES

Safety Management

Gives you full visibility into all the events that span a driver's history. Automatically connects pre-hire with post-hire, pulls data from CSA and popular telematics partners, and leverages Driver Pulse for easy document sharing, corrective training and coaching, quick communication, and more.

Bulk MVR

Ordering annual MVRs one at a time is now a thing of the past - simply select the subset of drivers you want to target using custom search criteria (like an anniversary month) and order all your MVRs in a matter of seconds.

CSA Integration

Provides total transparency into how your drivers are performing and sends you and your drivers on the road to improved safety. Our CSA service pulls daily carrier and driver FMCSA CSA data into the Tenstreet dashboard and features "infraction --> action", a groundbreaking approach in helping carriers promote a culture of safety in their organization that identifies and assigns corrective training to drivers based on the CSA infraction they received.

Clearinghouse Services

Designate Tenstreet as your TPA and we'll make life with the Clearinghouse easier every step of the way. We use our Driver Pulse network to reach drivers for a faster turn-around time to help you minimize any negative effect on your time-to-hire. We offer in-house support from a dedicated full query clearinghouse team, driver outreach and education, and reminders and forms. Carriers also get automated annual bulk limited query ordering, adverse action support, and DQF alerts, and reporting.

Driver Management

No more losing track of your driver's accidents and incidents with this high-level, cumulative view of your drivers' history. Create your own points system that uses automated workflow to send video trainings and quizzes to drivers to keep them on course with industry standards, regulations, and company policies.

Enhanced DQF

Unburden yourself from mountainous stacks of paper and a tangled Annual MVR process. The DQF Control Center reports missing/expired documents, lets you create custom alerts, request driver documents, and free yourself with stress-free, accurate file reporting.

Telematics Integrations

Review ELD-triggered dashcam events in your dashboard, set statuses, make notes within the dashboard about events you review, and run additional processes for the driver through telematics integrations with Lytx, KeepTruckin, and Geotab. Assign followup training modules to take action in a more meaningful way and use automation to make all this work easier for you while maintaining higher levels of compliance.
